PROFILE

Pre-final year B.Tech Artificial Intelligence student at SRMIST, Chennai (CGPA 9.58/10, graduating May 2028), building full-stack systems end to end — backend services and REST APIs, relational and document data models, and React front ends. Fine-tuned and deployed an on-premise coding-assistant LLM at ONGC, owning it from model through FastAPI service to working interface. Solid foundation in Data Structures & Algorithms, OOP, DBMS and Operating Systems, with 300+ algorithm problems solved in Java. Quick to pick up unfamiliar systems and languages.

EDUCATION

SRM Institute of Science and Technology (SRMIST) — Kattankulathur, Chennai
B.Tech in Artificial Intelligence · CGPA: 9.58/10.0 — Aug 2024 – May 2028

St. Joseph's Academy — Dehradun
Class XII (ISC): 91% · Class X (ICSE): 83.8% — 2022 – 2024

EXPERIENCE

SRM Institute of Science and Technology — Sep 2026 – Present
Research Intern, Deep Learning · Kattankulathur, Chennai

- Researching deep learning approaches to skin cancer detection under faculty guidance, training and evaluating image classification models on dermatological image data.
- Built the training pipeline in PyTorch — preprocessing, augmentation and class balancing — and ran systematic experiments comparing architectures and hyperparameters against standard classification metrics.

Oil and Natural Gas Corporation (ONGC) — June – July 2026
Summer Intern · Dehradun, India

- Built and deployed an offline coding-assistant platform (FastAPI, React, Ollama) for secure, on-premise development inside a restricted-network environment, fine-tuning DeepSeek-Coder 1.3B on 18k Python instruction examples as the model behind it.
- Designed modular backend inference pipelines and REST APIs around low-latency response generation and maintainable service structure, then built the React front end and integrated the system end to end.
- Defined the workflow so AI-generated code was reviewed, tested and validated before use rather than trusted blindly.
- Worked with a technical team through code reviews and design discussions, translating end-user requirements into functional, testable software components.

PROJECTS

CivicConnect — Multilingual Grievance and Scheme Finder — Website
JavaScript, Web Speech API, Node.js, Express, MongoDB, Jest

- Built and deployed a web app where citizens type or speak a grievance in English, Hindi or Tamil, with voice input via the Web Speech API.
- Built the backend with Node.js, Express and MongoDB (Mongoose), tested with Jest, Supertest and an in-memory MongoDB; added grievance tracking with random IDs (crypto.randomBytes), a status timeline, and a public endpoint that withholds personal details.
- Wrote a rule-based NLP engine running in the browser that sorts each grievance into one of 12 categories, rates its urgency and scale, and redirects to matching schemes on myscheme.gov.in.

SafeSight Edge — Real-Time Safety System for Heavy Machinery — GitHub
Python, YOLOv8, OpenCV, WebSockets, React

- Built an offline-first full-stack system for Tata Technologies InnoVent-27 that detects people in a heavy machine's blind spot, pairing a real-time computer-vision backend with a live React operator view over WebSockets, with zero cloud dependency by design.
- Designed zone-intrusion logic from first principles using point-in-polygon checks on each person's ground-contact point, with tiered warning and stop alarms, frame-debouncing to suppress false alarms, and offline incident logging with snapshots.
- Fine-tuned YOLOv8n on 10 construction-safety classes, flagging missing hardhats and vests in the same inference pass as person detection.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, C++, SQL
- **Backend & Full-Stack:** Spring Boot, FastAPI, Node.js/Express, REST APIs, Microservices, Multithreading, Relational Data Modeling, MongoDB
- **Front-End:** React, HTML/CSS, WebSockets
- **Engineering Practice:** Git/GitHub, CI/CD (GitHub Actions), Docker, Code Review, Secure Coding Practices
- **AI/ML & Computer Vision:** PyTorch, TensorFlow, OpenCV, YOLOv8, LLM Fine-Tuning, Ollama
- **Core CS:** Data Structures & Algorithms, OOP, DBMS, Operating Systems

ACHIEVEMENTS & LEADERSHIP

- Solved 300+ Data Structures & Algorithms problems on LeetCode (Java) across Arrays, Strings, Trees and Graphs.
- Selected for advanced training in Design and Analysis of Algorithms under an IISc faculty member.
- Won 1st prize at Bid-A-Biz, E-Summit, IIT Dharwad.
