PROFILE

Third-year Computer Science student (B.Tech Artificial Intelligence) who enjoys building complete systems end to end, from backend services to the interface people use. Drawn to software that solves real problems under real constraints: offline tools for restricted networks, real-time safety monitoring, and civic platforms that make public services easier to reach, with a growing interest in deep learning and computer vision. Works mainly in Python, Java and JavaScript. Committed to writing clean, well-tested code, learning fast through code reviews and team feedback, and validating AI-generated output rather than trusting it blindly.

EDUCATION

SRM Institute of Science and Technology (SRMIST) — *Kattankulathur, India*
B.Tech in Artificial Intelligence, CGPA: 9.58/10.0 — *Aug 2024 – May 2028*

St. Joseph's Academy — *Dehradun, India*
Class X (ICSE): 83.8% | Class XII (ISC): 91% — *2022 – 2024*

EXPERIENCE

SRM Institute of Science and Technology — Research Intern, Deep Learning — *Kattankulathur, India*
Sep 2026 – Nov 2026

- Working on a deep learning research project under faculty guidance.

Oil and Natural Gas Corporation (ONGC) — Summer Intern — *India*
June – July 2026

- Built and deployed an offline coding-assistant LLM platform (DeepSeek-Coder 1.3B fine-tuned on 18k Python instruction examples, Ollama, FastAPI, React) for secure, on-premise development in a restricted-network environment — designing the system so AI-generated code suggestions were reviewed, tested, and validated before use, rather than trusted blindly.
- Designed modular backend inference pipelines and REST APIs focused on low-latency response generation and maintainable software design, then built the frontend and integrated it end to end.
- Collaborated with a technical team through code reviews and design discussions, translating end-user requirements into functional, testable software components.

PROJECTS

SafeSight Edge — Real-Time Safety System for Heavy Machinery — *Python, YOLOv8, OpenCV, WebSockets, React*
GitHub

- Built an offline-first system for Tata Technologies InnoVent-27 that detects people in a heavy machine's blind spot, pairing a real-time computer-vision backend with a live React operator view over WebSockets, with zero cloud dependency.
- Fine-tuned YOLOv8n on 10 construction-safety classes, flagging missing hardhats and vests in the same inference pass as person detection.
- Designed zone-intrusion logic using point-in-polygon checks on each person's ground-contact point, with tiered warning and stop alarms, frame-debouncing to prevent false alarms, and offline incident logging with snapshots.

CivicConnect — Multilingual Grievance and Scheme Finder (team of 2) — *JavaScript, Web Speech API, Node.js, Express, MongoDB, Jest*
Website

- Built a web app where citizens type or speak a grievance in English, Hindi or Tamil, with a vanilla JavaScript frontend and voice input through the Web Speech API.
- Wrote a rule-based NLP engine that runs in the browser, sorting each grievance into one of 12 categories, rating its urgency and scale, and redirecting to matching schemes on myscheme.gov.in.
- Built the backend with Node.js, Express and MongoDB (Mongoose), tested with Jest, Supertest and an in-memory MongoDB.
- Added grievance tracking: random tracking IDs generated with crypto.randomBytes, a status timeline, and a public tracking endpoint that hides personal details.

TECHNICAL SKILLS

- Languages: Java, Python, C++, JavaScript, SQL
- Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems
- Backend & Full-Stack: Spring Boot, Express, FastAPI, React, REST APIs, MongoDB, Microservices, Multithreading, Relational Data Modeling
- Software Engineering: Unit Testing (Jest), Secure Coding Practices, Code Review, Git/GitHub, CI/CD (GitHub Actions), Docker
- Applied ML/CV (secondary): PyTorch, TensorFlow, OpenCV, YOLOv8

ACHIEVEMENTS & LEADERSHIP

- Won 1st prize at Bid-A-Biz, E-Summit, IIT Dharwad.
- Solved 300+ Data Structures & Algorithms problems on LeetCode (Java) across Arrays, Strings, Trees, and Graphs.
- Selected for advanced training in Design and Analysis of Algorithms under an IIM faculty member; serving as Class Representative while maintaining a 9.58 CGPA.
